Forecast for Monday 26 Jul 2021

Weather: Clear skies to start the day, allowing mist and fog patches to form in the valleys around dawn before quickly clearing. Dry with long intervals of sunshine through the morning. Patchy cloud will begin to build from around midday, giving the risk of an isolated short-lived shower in the middle of the afternoon. Any showers that do form will fade into the evening, though the cloud will build more widely into the night.

Chance of cloud free mountain/hill tops above 600m: 90% for much of the day, falling to 70% in the late evening and night.

Visibility: Generally very good with excellent clarity, however locally poor in any valley fog around dawn. Any showers in the afternoon will briefly obscure views of nearby hills. Low cloud developing around 400-500m in the final few hours of the day, bringing poorer visibility particularly to southwestern slopes.

Meteorologist's View

UV levels will be very high and there will be long intervals of clear skies, therefore remember to wear sun cream and stay hydrated through the day.

Forecast for Tuesday 27 Jul 2021

Weather: Cloudier in general on Tuesday with scattered showers soon spreading across the park in the early hours. These will continue throughout the day and into the evening, being heavy at times and bringing the risk of thunder and hail.

Maximum wind: Winds on the summits initially southwesterly 15mph, transitioning to westerly through the afternoon with gusts speeds also increasing to 25mph.

Chance of cloud free mountain/hill tops above 600m: 50% through the day.

Visibility: Widely cloudy through the day, with bases intermittently falling to 300-400m and obscuring slopes and summits above this. Visibility also becoming poor in any showers, particularly if heavy and associated with hail.

Temperature: **Valleys:** Plus 14 Celsius, rising to plus 20 Celsius.
At 600m: Plus 10 Celsius, rising to plus 12 Celsius.
Freezing level: Above the summits.
